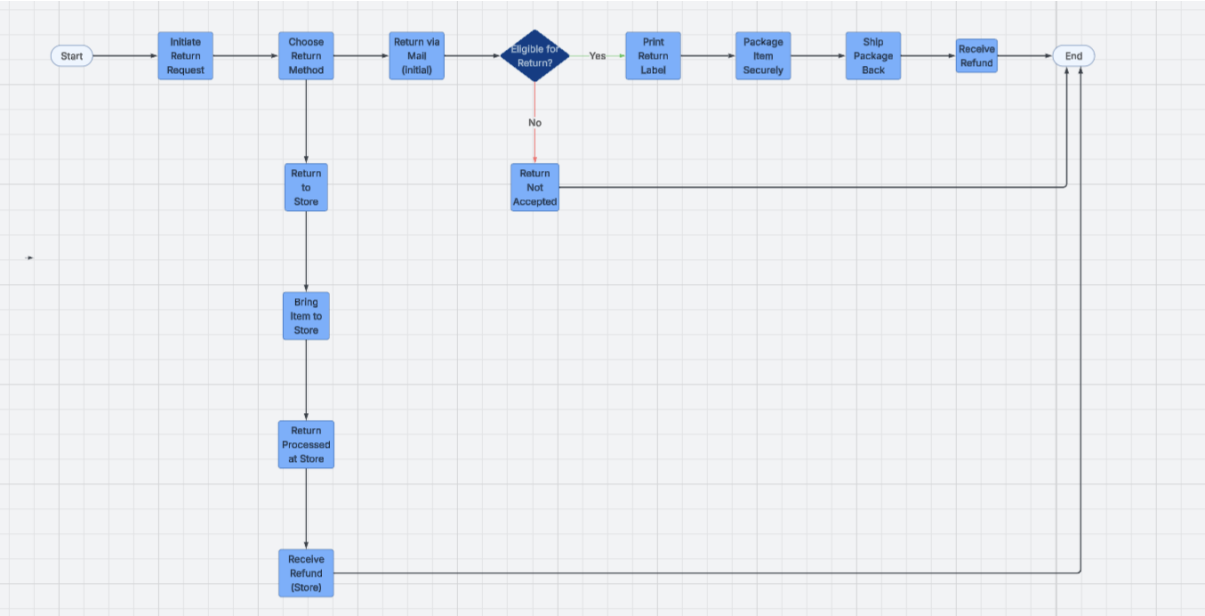
Return Processing Flow Diagram



Step-by-Step Process

1. **Start**
   The return process begins when the customer decides to return a product.
2. **Initiate Return Request**
   The user selects the product and clicks the **Initiate Return** button.
3. **Choose Return Method**
   The system asks the user to select a return method:
   - Return via Mail
   - Return to Store

Mail Return Process

4. **Return via Mail (Initial Step)**
   The system begins the mail return procedure.
5. **Check Eligibility for Return**
   The system verifies whether the product is eligible for return based on:
   - Return policy
   - Return time period
   - Product condition
6. **If Eligible (Yes)**
   - The user **prints the return label**.
   - The user **packages the item securely**.
   - The user **ships the package back** to the company.
7. **Receive Refund**
   After the returned item is received and verified, the **refund is processed**.

Store Return Process

8. **Return to Store**
   The user chooses to return the item directly to a physical store.
9. **Bring Item to Store**
   The user takes the product to the store location.
10. **Return Processed at Store**
    The store staff checks the item and processes the return.
11. **Receive Refund (Store)**
    The refund is issued after the return is accepted.

If Return Is Not Eligible

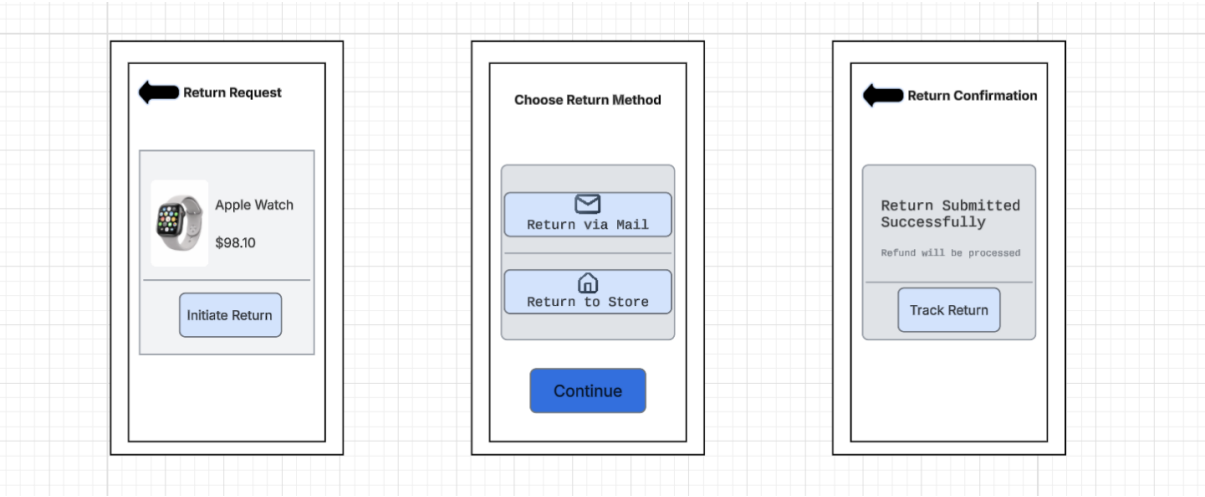
- If the product **does not meet the return conditions**, the system shows **Return Not Accepted**.
- The process then **ends without refund**.

End

The process ends once:

- The **refund is received**, or
- The **return request is rejected**.

Return Request and Refund Processing System



1. Return Request User Interface

The Return Request screen allows the user to start the return process for a purchased product.

Explanation:

- **The screen displays the product details, such as the product image, name (Apple Watch), and price.**
- **A back arrow is provided at the top to navigate to the previous screen.**
- **The Initiate Return button allows the user to start the return process.**
- **When the user clicks Initiate Return, the system moves to the Choose Return Method screen.**

This screen acts as the starting point of the return process.

---

2. Choose Return Method Interface

The Choose Return Method screen allows the user to select how they want to return the product.

Explanation:

- **Two return options are available:**
  - **Return via Mail – The user sends the product through a courier service.**
  - **Return to Store – The user physically brings the product to the store.**
- **Each option is represented with an icon and button for easy selection.**
- **After selecting a method, the user presses the Continue button to proceed to the next step.**

This screen helps the system determine the return processing path.

---

3. Return Confirmation Interface

The Return Confirmation screen confirms that the return request has been successfully submitted.

Explanation:

- **The screen displays the message "Return Submitted Successfully."**
- **It informs the user that the refund will be processed after the return is received and verified.**
- **A Track Return button allows the user to monitor the return status.**
- **The back arrow helps the user navigate back if needed.**
